

Ad Management

The Ad Management module allows you run and track banner ads for a number of different advertisers. Simply add a new banner, then upload the image you wish to display in .gif or .jpg format. Then, create an ad position and assign your new ad to that position. You can assign one or many ads to each position.

Calendar Management

Add events using the Calendar Management module. Your events will automatically be removed after their ending date so your website will always be up to date.

News Release

Write press releases for publication on your website. Keep your site visitors up to date with what is happening.

Picture Gallery (see Animated Photo Slide Show)

Upload pictures, photos, and images and separate them into galleries and sub-galleries. This makes it easy and simple to have a full-fledged photo album on your site.

Content Manager

Perhaps the most versatile WebAdmin tool, the Content Manager module allows you to add and edit most content on your website. You can also add and sort large amounts of information in a special "Library" feature.

Newsletter Admin

Use the Newsletter Admin module to generate lists of users who have signed up for your newsletter from your website. Differentiate between email and snail-mail signups and maintain the user database.

Web Poll Management

This module allows you to create and maintain one or more interactive web polls on your website. Find out what your visitors are thinking and get them involved!

Optional WebAdmin Capabilities Examples

Multi-user Login Manager: Allows for administrators, partners or users with restricted access to content articles, categories, banner positions and galleries.

Contribution/Donation Manager: Allows gathering of contributions and donation data from online form. Requires SSL (digital certificate) installation for data security.

* Custom applications and tools have been integrated with WebAdmin for ease-of-use and to maintain a common user interface across applications.

File Manager

Eliminates the need to use FTP applications for most file upload tasks. The File Manager allows uploading files directly from your local computer, shows the files' name, size, pathname (for use in linking from within documents) and the upload date.

Animated Photo Slide Shows

Easily create an animated photo slide show for your site. Simply upload your images to the photo gallery and the slide show module automatically creates thumbnails and generates a thumbnail slider with a dynamic photo display. The original "static" photo display gallery is available for a particular gallery or custom application.

Article Key Words Tags

Assign key words or "tags" to each content article. Tags can be displayed at the bottom of article so visitors can click through to see related content with the same "tags". Keyword tags enhance your visitor's experience and improves cross-site linking.

Optional Rich Text WYSIWYG Editor *

The WYSIWYG editor allows formatting text, links, and images in your articles. Of course if you like to see the HTML, that is still available.

Asset Manager *

Asset Manager is integrated directly into the WYSIWYG Rich Text Editor. Upload images and add them to articles or new releases from within the editor. Virtually eliminates back and forth between pages to manage site's image assets.

Easy Cross-Links *

With the new Page Links feature built into the RTE WYSIWYG editor, you simply highlight the link text, select the Page Links button, and a pop up opens showing you all of the available articles that you can cross link to. Select your target article, and you're done.

* Works with the Rich Text WYSIWYG Editor
